

Alexa Skill Setup and Voice Control Tutorial

Connecting the Amazon Echo Dot will allow you to control your smart devices through voice commands. Amazon uses the name “Alexa” to refer to its voice assistant. With your Connected Annapolis Hub and app, you will be able to tell Alexa to activate your smart devices.

1. To connect your echo dot to your smart home, you will first need to set up the Alexa App on your smartphone or tablet device.
 - Go to the Google Play store or App store and download Amazon Alexa.
 - You will need to have an Alexa account set up. You can use an existing Amazon account if you have one.
2. Once Alexa is downloaded and you are signed in, Click on “Skills & Games” from the menu.
3. On the top right of the screen, click the search icon and type “Connected Annapolis.” You should see the Connected Annapolis Smart Control skill come up as the first option.
 - Click “Enable.”
4. You will be prompted to enter your Connected Annapolis account information.
5. Next, select the devices you’d like Alexa to control.
 - You can enter custom names for each device and scene that you import. Be sure to use easy to remember names as they are what Alexa will recognize as command words.
6. When you are done adding the devices, click “Finish” and then “Discover Devices”, the connection could take up to 30 seconds to complete.

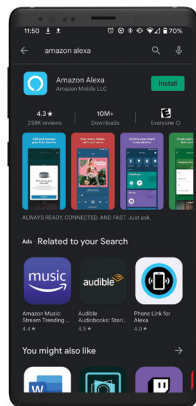

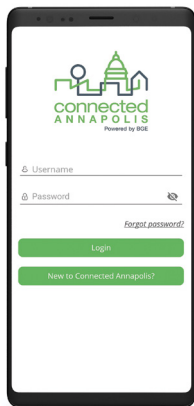

Need Assistance?

Technical support is available daily from 6 a.m. - 10 p.m. ET

7. Once you are finished, you can test the voice controls by saying, “Alexa, turn on the Living Room lights!”

You can customize the Alexa app to control more than one device at a time, whole rooms, or even your entire house! You can import scenes as well. For example, you can create a scene in the Connected Annapolis app called GOOD NIGHT that will turn off all the lights except for the bedroom and set the thermostat to 68 degrees. The possibilities are amazing! Try it out for yourself and get the full experience of a voice commanded smart home!
